TEMPLATE RULES

Always use a 1/2" Ruler Foot and an extension table on your machine when using templates.

Make sure that your extension table is flat and even with the machine bed. If you have any irregularities where the table meets the machine bed or holes, use a Sew Steady Free Motion Glider.

When using templates make sure that your quilt is correctly basted using your preferred method.

Remember that every stitch of quilting that we sew draws in our quilt, so it is always necessary when quilting to make slight adjustments as you go so that our pattern sews out correctly.

When using templates slow down.

When holding the template on the quilt do not push so hard that you restrict the movement of the quilt.

Your Circles on Quilts tools are marked with the sewn line and guidelines.

Mark the block with a cross-hair, from corner to corner.

Place the locating pin in the center intersection of the cross-hair lines from underneath the quilt.

Place the template over the pin.

You are now ready to stitch!

Our Circle templates are easy to use with our simple single pin.

Step 1. Find the center of where you want to place your design.

Step 2. Insert the pin from under the quilt at the center.

Step 3. Place the template over the pin and sew.

We have been making rotating templates since 2010 with the release of Circleworks, followed by our very popular Spin-e-fex range in 2012.

Using a single pin there is only 1 point of rotation, there is less chance of movement, causing distortion of your quilting.

With Circles on Quilts you can sew concentric circles from 1" to 12", and at 1/4th increments.

You can use Circles on Quilts to sew Baptist Fans as never before.

With our simple single pin rotation for your template, the Circles on Quilts range is super easy to position on your quilt.

Combine Circles on Quilts with Spinning waves to create amazing Baptist Fans
