Reduces skipped stitches and sewing thread breakage. Deeper scarf than other needles facilitate large and stable loop formation to enable looper to pick up thread. Alleviates sewing thread breakage that can occur when looper fails to pick up loop.

Deeper Scarf

Regular needle

Modified cross-section of needle blade makes needle more rigid to prevent needle deflection, reduces needle vibration and needle breakage.

Dual Side Scarves

Both sides scarves are designed to avoid collision with point of sewing hook, prevent needle vibration, protect the wearing of the point of the sewing hook. Because of the dual side scarves, the needle can be used with rotary hook, horizontal type of rotary hook and shuttle hook.
