

Removing Security update for Windows XP KB917422

You must first disable the updates; otherwise as soon as you remove the update and reboot your computer, the update will automatically reload.

To disable the updates:

- **Left Click on Start.**
- **Left Click on Control Panel.**
- **Left Click on Security center.**
- **Left Click on Automatic Updates located at the bottom of the pop-up screen.**
- **Select either Notify me but...or Turn off Automatic updates. (You may choose the one that you prefer).**
- **Left Click on OK.**

To remove the update:

- **Left Click on Start.**
- **Left Click on Control Panel.**
- **Left Click on ADD/REMOVE programs.**
- **Check (√) the “Show Updates” box at the top of the pop-up screen.**
- **Scroll down and look for “Security Update for Windows XP (KB917422)”**
- **Left click on this update.**
- **Left Click on remove.**
- **Continue following the prompts such as Next and Finish to remove the update.**
- **Reboot computer.**

The Futura program with the Option should now open or install if necessary.
