

Proper Installation and the Use of the Iron

Water valve

Silicone hose

Hose barb

Connect the silicone hose

As shown left from the water bottle to the iron. The bottle should be over the head high

And the hose must not be folded or hanging below the iron.

When the steam doesn't come out enough:

- A. prepare water container.
- B. close the water valve
- C. take off the silicone hose from hose barb of the iron
- D. place the end of the silicone hose that was just taken off from the hose barb into the water container
- E. open the water valve fully so that the water flows down to the container and the silicone hose is filled with water
- F. close the water valve and connect to the hose barb again.
