

Dust Bag Proper Installation

It is *extremely* important to make sure that your dust bag is properly installed. Although this seems simple, an improperly installed bag can “leak” dust and dirt into the bag compartment, clogging the exhaust (HEPA) filter.

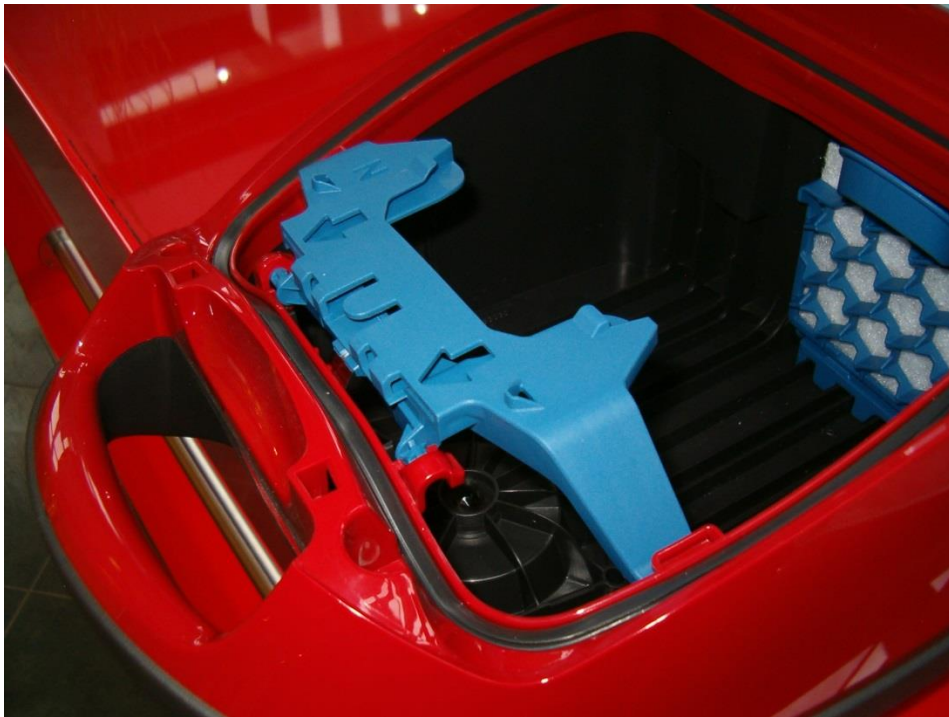

Anytime the bag door is opened for any reason, you must ensure that the bag remains properly installed in the bag holder. This is done by simply pushing the bag into the bag holder. As you will see from the pictures below, an “out of place” bag will not always be obvious.

If you have any further questions or concerns, please give us a call.

Miele Technical Service

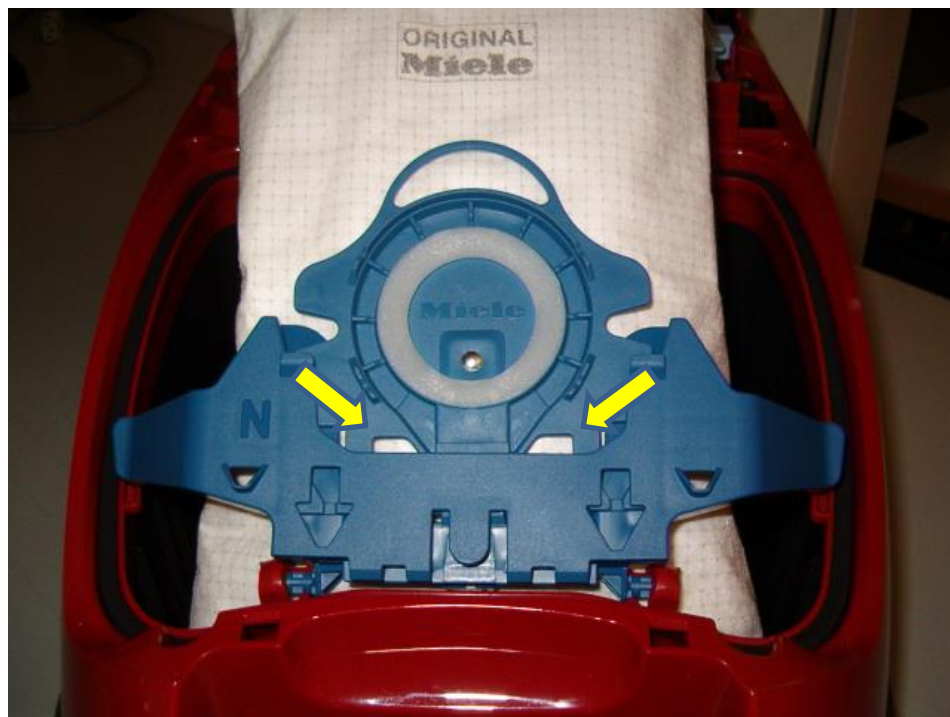

Bag holder properly installed – free to move

Bag holder **NOT** properly installed – pushed down

Dust bag properly installed

Dust bag **NOT** properly installed – bag is just slightly out of the holder

Verifying that the dust bag is properly installed with the bag door closed
